

Visione

VE4000PVR

For NZ Freeview HD terrestrial service with USB PVR

HDMI

The Visione VE4000PVR digital terrestrial receiver for the Freeview HD service with USB PVR provides crystal clear pictures at true 1080i high definition via HDMI. Even on the channels that are not HD you can still receive up-scaled HD at 1080i on your HDTV.

The VE4000PVR also has the single tuner USB PVR function. Just plug in a USB HDD or flashdrive and you can begin recording. Set to record TV programmes or movies and play back at your leisure. You can record one channel while watching another on the same mux.

HD via HDMI & Component

The Visione VE4000PVR has no HDCP so it is not restricted to modern HDTVs with HDCP. It also outputs the HD 1080i video on HDMI as well as via component, ideal for older HDTVs.

USB PVR Function

Just plug in a USB HDD or flash drive and the VE4000PVR will be ready as a full single tuner PVR for Freeview HD.

Bring up the Record Manager menu to watch your movies or series whenever you wish.
